Anthony Carapetis Curriculum Vitae

@ anthony.carapetis@gmail.com

——— AT A GLANCE ————

- Professional software developer with emphasis on web development, data transformation and integration.
 Mathematics PhD in geometry and differential equations.
 Experienced in data visualization and graphic/web design.
 Perl, PHP, Java, Ruby, Python, C++
 HTML5, CSS3, Modern JavaScript
 MySQL, SQLite, PostgreSQL
 Linux, Git, Docker

-WORK HISTORY —

A six month position at the High Resolution Plant Phenomics Centre, developing software devoted to integrating, visualizing and analysing data for agriculture and plant science. My main focus has been developing new software infrastructure to support time series data gathered from sensor networks:

- Streamlined existing data ingest processes and improved guery performance by moving to an InfluxDB storage solution, with several levels of time-based aggregation caching.
- o Built a RESTful API to manage metadata and retrieve time series data
- o Designed and developed a diagnostics dashboard and data visualization tools on top of this API, integrated into an existing PHP web application. Used JavaScript, including the libraries D3.js and Plotly.js along with modern web standards (HTML5, SVG, CSS3 transitions, ES6 modules, Web Components, etc.).

I am also helping with other projects using various technologies:

o Languages: PHP, Java, Python o Databases: MariaDB, SQLite

o Containers: Docker

For source control, project management and documentation, we use Git, Bitbucket, JIRA and Confluence.

-Casual Sessional Academic ------ 🗰 2015-2017 👖 Australian National University 👂 Canberra Teaching and marking for undergraduate classes in mathematics and astrophysics.

Full-stack development of web-based software, along with administration of associated systems and databases.

I worked on various large web applications, mostly with backends built in Perl on top of Apache and Linux, using modern frameworks including Mason, DBIx::Class, Moose and Dancer. They were typically backed by relational databases like MySQL, PostgreSQL, and SQLite, and regression-tested using Test:: More.

Many of these applications were part of accounting and resource management systems for mid-sized companies, interfacing with older proprietary software; so I became proficient in data wrangling/ETL.

I was also involved in developing simple deployment architecture, writing scheduled processes to carry out heavier business logic and reporting tasks, and thoroughly testing automated backups; so I have extensive experience using shell scripts, cron jobs and daemons to automate systems.

On the frontend, I used HTML, CSS and JavaScript (including libraries like iQuery and Sencha/ExtJS and the extensive use of AJAX) to create interactive user experiences.

-Sessional Teaching Associate --------------- ## 2012 ## Monash University • Melbourne Teaching and marking for undergraduate engineering calculus.

Front-end development and maintenance of small websites.

- EDUCATION -

PhD Thesis: Geometric Flows of Diffeomorphisms

Supervisor: Ben Andrews

Geometric flows hijack the physics of heat flow to study geometry: by making a mathematical analogy between "spikiness" and heat, we can deform poorly-understood spiky objects to simple smooth ones; and by understanding the mathematical properties of this deformation we can derive new knowledge about the spiky things we started with. In my thesis research, I applied this methodology to a previously unstudied class of flow.

Majors: Mathematics, Physics

Honours Thesis: The Riemannian Penrose Inequality and the Inverse Mean Curvature Flow

Supervisor: Gilbert Weinstein

The universe should weigh at least as much as the biggest black hole it contains, but the mathematical embodiment of this fact (the Penrose Inequality) is remarkably difficult to derive from general relativity: it took until 1999 for even a special case to be proven. This thesis was an exposition of the problem and its solution intended for a slightly less expert audience.

-UNDERGRADUATE RESEARCH —

-OTHER EXPERIENCE —

- --Some things don't come from work or school.
 - Computational Mathematics/Visualization: as a spin-off from my thesis research, I combined numerical simulations of partial differential equations with my expertise in frontend web development to develop interactive visualizations of some geometric flows, which you can play with online at a.carapetis.com/csf/(JavaScript + Canvas) and a.carapetis.com/diff_flow/ (PixiJS).
 - My professional history has been concentrated on a few languages, but I have hobbyist experience with many others, including Ruby, C++, and Haskell
 - Graphic design (free and small freelance projects) using Inkscape and GIMP
